

How to Override the New Filter (Elementaries)

Overrides on the new web filter are based on your BVLS.LOCAL domain login. This is the same login that you use for TestingWerks. Once you login to the new web filter, you will have access to the websites that can be overridden. Only staff member logins will override the filter.

1. When you get to a website that is blocked by the web filter (YouTube for example) you will see the blue access denied screen below:

2. At the top where it says “Currently logged in as unknown user”, click where it says: **(Not you?)**...This will take you to the login page, shown below:

Please Login ...

jsmith

bvls.local ▼

Browse the web!

3. Here, you will want to login with your BVLS.LOCAL computer login credentials. Type your username and password and make sure the dropdown says “bvls.local”, as seen in the picture above. If your login information has not been changed, your username is FirstInitial+LastName and your password is “12345” without the quotes.
4. When you are finished, make sure the information is correct and click “Browse the web!”
